### Screen: Selecting Game Scenario

#### If REVEAL TREATMENT

Your partner is [insert type] and you are [insert their own type].

#### If NO REVEAL---nothing just instructions

Please rank your preference for the scenario you would like to play from first choice thru fourth choice. The computer will randomly select your first choice or your partner's first choice to be played. However, with 8%, probability your first choice will be thrown out and the computer will randomly pick your second choice or your partner's second choice. Consequently, please make your ranking reflect your top choices.

Then you and your partner will play whichever choice is selected and move on to the next round.

Sequential play: I'm player A and my partner is player B	_____
Sequential play: my partner is player A and I'm player B	_____
Simultaneous play: I'm player A and my partner is player B	_____
Simultaneous play: my partner is player A and I'm player B	_____

Randomly pick which partner's choice we use.

Then both partners are made aware of which choice was selected on the screen.

Then both partners play their parts.

(Continue 4 more times for a total of 5 rounds)

**Comment [1]:** They rank all, you pick first choice except 8% of the time you pick random second choice. If you can't do the 8% thing let me know.

Only let them choose 1-4, so probably a select menu here.

Thanks!
